About ...

CPACS has been an international pioneer and leader in the business continuity planning and risk assessment industry since 1984. We have maintained this leadership position by providing a high-quality, feature-rich product line that is both scalable and affordable to address the requirements and budgets of a diverse range of private sector and government clientele worldwide. Our no-nonsense approach to software design delivers flexible, streamlined business continuity plan development and risk assessment tools that require minimal training and administrative costs, and an overall lower cost-of-ownership when compared to competing products and alternative plan development methods. An exciting NEW offer!

Is your company prepared?

It is a common problem: You understand the importance and know that you need to have a Disaster Recovery (DR) and Business Continuity Planning (BCP) solution in place to protect your company ... but a plan has not been developed because you simply don't have the budget, resources or the expertise within your organization for such a project. There is now a very good alternative for you.

A Cost-Effective & Proven Solution:

The Every Business Continuity Program

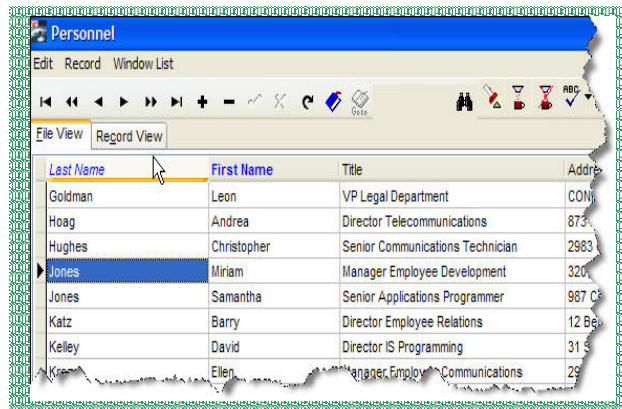

This solution combines expert consulting, powerful Relational Database software and a wealth of disaster recovery resource information ... all at an affordable price! An excellent way for all companies to start a Business Continuity Program, this offering is available for as low as \$100 per month for the first year and the fees are even lower in subsequent years. It is scalable to meet the requirements of any size organization and is a truly great way to get started. The total annual fees are often less than just one day of typical DR consulting

As easy as 1 ... 2 ... 3!

A key component of this solution is the RecoveryPAC SBE, Lite and Full software products from CPACS. These tools transform Disaster Recovery and Business Continuity Planning into a very straightforward and easy-to-use process.

Step 1:

Replace generic resource data in the included template planning database such as people, equipment, vendors, etc. with your own data. RecoveryPAC SBE, Lite or Full automatically updates the plans with your own data.

The screenshot shows a software window titled "Personnel" with a menu bar (Edit, Record, Window List) and a toolbar. Below the toolbar is a "File View" section with a "Record View" button. The main area contains a table with the following data:

Last Name	First Name	Title	Address
Goldman	Leon	VP Legal Department	CON
Hoag	Andrea	Director Telecommunications	873
Hughes	Christopher	Senior Communications Technician	2983
Jones	Miriam	Manager Employee Development	320
Jones	Samantha	Senior Applications Programmer	987 C
Katz	Barry	Director Employee Relations	12 Be
Kelley	David	Director IS Programming	31 S
Kramer	Ellen	Manager Employee Communications	29

Step 2:

Modify the template plans with the specific business recovery requirements for your organization.

Step 3:

Print or publish your plans using the included preformatted color reports. Your plans are automatically kept up to date as the RecoveryPAC SBE, Lite or Full central resource files are maintained.

The screenshot shows a detailed recovery schedule report titled "Recovery Schedule - Detailed" (Chapter 3.4-5, Page 4 of 9). It lists tasks with start and planned finish times. The tasks shown are:

- 25 Obtain Cash Advance (Start Time: 2:20, Planned Duration: 0:20) - Michael Crosby
- 26 Relocate to Alternate Facility (Start Time: 2:50, Planned Duration: 0:50) - [Name]
- 27 Review Recovery Priorities (Start Time: 3:00, Planned Duration: 0:20) - Michael Crosby

Each task includes a "Personnel List" and "Inventory Item - Sub-Inventory - Stock/Off-Stock (S/O)" fields.

RP Risk Advisors and our partners commit to these key deliverables:

- Excellent service
- Fully scalable solutions
- Cost-effective solutions
- Ease of installation and use
- Solutions that will address Compliance/Regulatory needs
